

Flexible PVC Stair Edgings

Data Sheet: (sheet 1 of 2) October 2015 KRO/LB

This leaflet has been compiled to help the user obtain optimum performance and satisfaction from their selected product:

Preventative Maintenance Programme

A regular scheduled maintenance programme should be employed to prevent the build up of dirt and grease, which will reduce the anti-slip properties of the channel and detract from the overall appearance of the product.

NB. Under no circumstances should any cleaners containing hydrocarbons, bleach, pine oil or citrus based agents be used to clean any Gradus Stair Edging.

Steam cleaners, power washers, floor sealants, polishes or any coatings should not under any circumstances be used on inserts.

Daily Cleaning

Brush down the channel using a soft bristled brush and remove dust particles from the insert by wiping with a damp cloth.

PVC Channel

Stubborn marks such as boot blacking may be removed from the PVC channel by means of a green scotch pad and suitable detergent. Due to the physical properties of the PVC material, we strongly recommend that the green pad is changed regularly.

Twice Weekly or as Required

Brush down the channel using a soft bristled brush. With clean, warm water, containing the correct dilution of aluminium safe cleaning solution apply a small amount to a well rung out damp mop or a Vileda Padmaster/3M Doodlebug and gently clean the surface of the insert in a left to right motion. During the clean, the water must be changed on a regular basis. **Do not** soak the insert. Once the stair edging has been cleaned thoroughly rinse with fresh, clean water, making sure as much water is removed as possible

On completion the staircase should not be used until completely dry.

The cleaning methods described for the above mentioned products can be used with other Gradus PVC products.

Vileda Padmaster

3M Doodlebug
